Raz-Lee Security Completes Integration with McAfee Database Activity Monitoring and McAfee Enterprise Security Manager

*Integration driven by joint customers' needs for increased interoperability
between Raz-Lee's security products and McAfee's solutions*

Nanuet, New York (December 19, 2013) – Raz-Lee Security, a leading provider of IBM i security, auditing and compliance solutions, today announced that it has completed integrations with the McAfee Database Activity Monitoring (DAM) solution and McAfee Enterprise Security Manager (ESM) and that both integrations have been deemed as McAfee Compatible. Raz-Lee joined the McAfee® Security Innovation Alliance™ (SIA) partner program almost one year ago, and has integrated relevant products from its iSecurity suite with McAfee's DAM and McAfee ESM to enable customers running IBM i (AS/400) systems to leverage their investments in McAfee software while adding complementary capabilities.

iSecurity's integration with McAfee DAM entails collection and transfer of IBM DB2 for i (DB/400) activity. As is the case with DB2 usage on other platforms, the McAfee sensor receives real-time event information from iSecurity, evaluates the activity and communicates with the McAfee DAM server to apply policy rules and provide detailed and summary reports. The integration of the IBM DB/400 data with similar data collected on other platforms provides added-value which benefits joint customers.

The McAfee ESM integration enables corporate personnel involved in monitoring real-time security event alerts to receive alerts originating on the IBM i, and analyze these in parallel with security-related alerts from other platforms.

Shmuel Zailer, CEO/CTO of Raz-Lee Security said: "Raz-Lee is proud to be part of McAfee's SIA partner program. The use of iSecurity solutions will enable multi-platform users of McAfee DAM and McAfee ESM to incorporate real-time, database and security-related information and alerts originating from IBM i systems. Implementing these integrated solutions will help joint customers enjoy faster time to deployment and lower total cost of ownership."

"We are pleased to add Raz-Lee Security to the McAfee SIA program," said Ed Barry, vice president of Security Innovation Alliance, McAfee. "Our partnership with Raz-Lee Security will enable IBM i customers to leverage the benefits of the McAfee DAM and McAfee ESM products by delivering an integrated and more comprehensive security and database monitoring solution."

About Raz-Lee Security Inc. and iSecurity

Raz-Lee Security is a leading international provider of security, auditing and compliance (SOX, PCI, HIPAA, etc.) solutions for the IBM i. Raz-Lee's customers include companies of all sizes, from SMBs to enterprises with hundreds of systems, in all vertical markets and industries. Financial institutions such as banks and insurance companies are especially well represented amongst Raz-Lee's clientele.

The iSecurity suite of products includes both **infrastructure security solutions** which protect network access, monitor and report on system activities, manage user profiles and authorities, track software changes, etc., and **application security solutions** which audit database activity, provide real-time alerts when critical business data changes, enable Business Intelligence analysis of application data changes and much more. iSecurity has full multi-LPAR management capabilities and operates in both green-screen and full GUI modes.
