

Audit

DATASHEET (iSecurity Suite Auditing & Response)

Auditing, Monitoring and Reporting

Recent regulations concerning business transparency have placed security auditing as a key component of any organizational IT security program. Simply creating a security policy and purchasing security software tools is not enough.

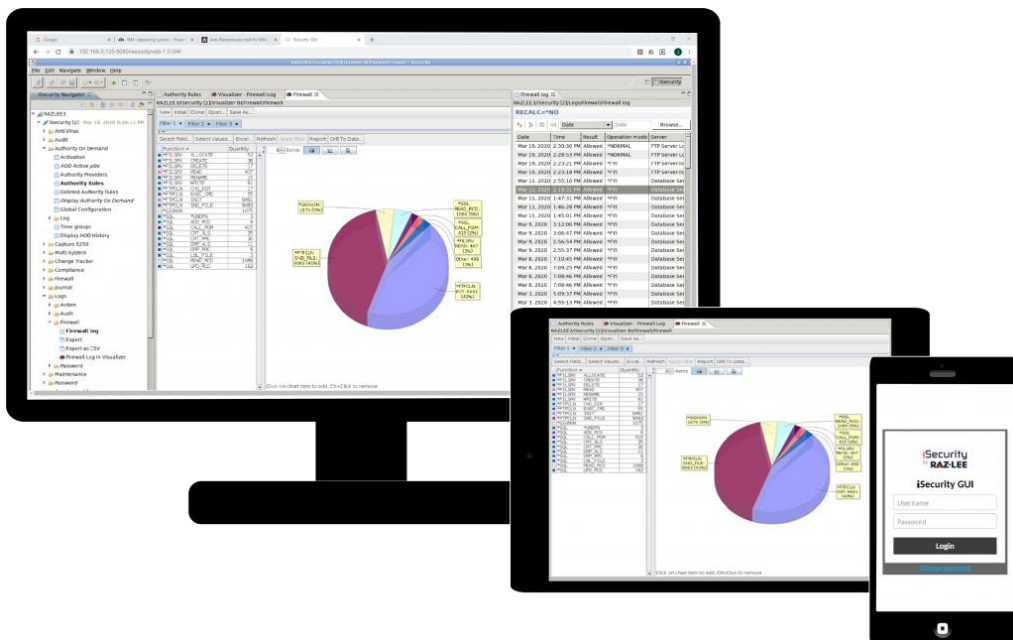

Management must ensure that security policies and procedures are properly implemented and enforced. In addition, managers must be able to evaluate and test the effectiveness of these policies on a continuing basis.

IT Audit at IBM i

Auditing determine whether IT controls protect corporate assets, ensure data integrity and are aligned with the business's overall goals. A very good way to ensure IT systems are reliable, secure and not vulnerable to computer attacks. Also to reduce risks of data tampering, data loss or leakage, service disruption, and poor management of IT systems.

iSecurity Audit solves that problem and more. As a Cutting-edge security auditing application that examines events in real time, and triggers alerts and other responsive actions to potential threats. New GUI features providing user-friendly interface for working with the large, often confusing number of system values and parameters.

iSecurity Audit enhances native IBM i auditing by monitoring and reporting on all activities in the IBM i environment. It employs real-time detection to identify security events as they occur and record details in a log file.

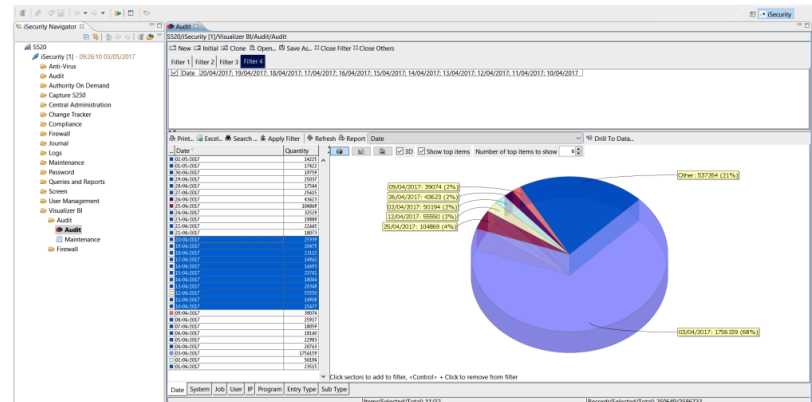

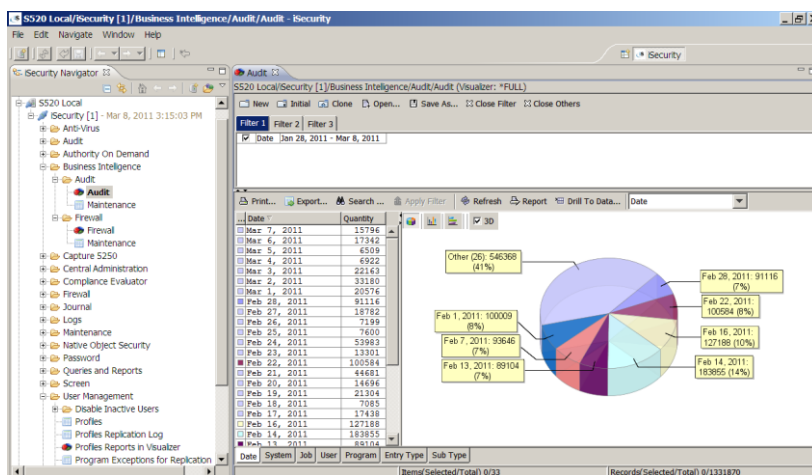

Key Features

- Monitors user activities and object access in real-time
- Triggers alert messages and corrective actions (iSecurity Action)
- Query Wizard create queries quickly and easily without programming
- Time groups apply rules and filters at predefined times
- Backward Glance feature quickly look at what happened in the last few minutes
- View multiple audit types with one query
- Sort query data in any order
- Design custom output for query data
- Report Scheduler
- Audit Scheduler
- Integrates with BI (iSecurity Visualizer)

iSecurity Audit's enhanced reporting possibilities

Audit offers the most powerful and flexible reporting features available today. It includes more than eighty ready-to-run queries and reports.

- Query Wizard allows users to quickly and easily create audit reports without programming.
- Queries employ robust selection criteria such as AND/OR, equal/not equal, greater/less than, like/not like, included in list, etc.
- Only the information that you really need is included.
- Report formats are fully customizable

Installation Requirements

- Operating system 7.1 or higher
- 300 MB of disk space for initial installation
