

Efficient and Secure File Editor

Information retrieval and manipulation methods such as DFU or QUERY, require compilation and definition steps.

Unlike SQL, iSecurity FileScope enables modifying database requests on the fly, performs record updates under your visual control, holds complete control over printing of reports and supports UNDO for any change!

Edit files at IBM i with iSecurity FileScope

The primary focus of iSecurity FileScope is to enhance general user productivity and at the same time provide super user level tools to those who can benefit from them:

- System Administrators
- DBAs

iSecurity FileScope's powerful capabilities have enabled thousands of iSeries users worldwide to quickly and easily perform file editing functions as well as advanced activities such as global and local record updates, data conversion and creation of test data.

```
4 records          Show file SMZODTA/JCDFTEDP          Mbr: JCDFTEDP
Select one of the following:          Fmt: JCDFTEPR
                                      Vpt: *NEW
1. SUBSET Structured                  31. Flat files support
2. SUBSET Advanced                    45. Save viewpoint
3. SUBSET Free style                  51. File information
4. SORT, Restrict to Unique           61. Multi-session manager
6. Deactivate SUBSET/SORT            71. Join
7. Remove SUBSET/SORT
8. Statistics
9. EXPORT          (OPNQRYF statement) 81. Report Generator
                                      85. i-Business Intelligence IBI
21. Print multiple records            91. Create new file
22. Print single record               92. Convert to IFS
25. Print Record Structure            93. E-mail as *CSV, *SAVEF...
                                      94. FTP as *CSV, *SAVEF...
Selection █                          Use wide 132/27 screen . . N   Y/N
                                      Ignore UC/LC in SUBSET . . Y   Y/N
F3=Exit   F12=Cancel   F21=Command
```

Key Features

- FileScope includes Unicode support which enables viewing SAP, JDE, MOVEX, BPCS, and other files.
- Improved SOX/PCI support
- SYSLOG/SNMP Messages for SIEM transmits up to 1000 lines per second.
- User Activity List Email including users, times and actions.
- XML support
- Report Generator
- Full Screen Update

Installation Requirements

- Operating system 7.1 or higher
- 300 MB of disk space for initial installation

How iSecurity FileScope Enhances Programmer's Productivity?

- Triggers alert messages and corrective actions
- High speed report generator, with no prior preparation
- Subset Feature
 - Enables field names when defining subsets
- Query Wizard
 - Quickly creates queries without programming
- Software development and maintenance times are greatly reduced
- Advanced error tracing and identification capabilities
- Print, e mail or export a complete audit trail
- Undo any set of changes, or particular change, performed during the last 99 days
