

# Orchestrator for AIX

DATASHEET (iSecurity Suite Cyber Protection)

## Simplify Server Security Management

The New iSecurity Orchestrator makes automation and orchestration tasks easier for your iSecurity Products on the AIX Servers.

As a first step, it manages several AIX servers at once, and entirely the AV module for AIX. Also you can manage all the operations from a simple Web Interface.

IP	Description	Time	Task	Status
1.1.1.97	AIX2 - second AIX server on our internal network	10/22/2024, 9:33:06 AM	wget Log	Completed
1.1.1.99	AIX1 - first AIX server on our internal network	10/22/2024, 9:26:25 AM	Refresh signature DB Razlee	Completed
		10/22/2024, 9:22:48 AM	Scan a directory	Completed
		10/22/2024, 9:06:27 AM	AV on-access Status	Completed
		10/22/2024, 9:06:19 AM	Infected Files In Quarantine	Completed
		10/22/2024, 9:06:13 AM	All logs and debug files	Completed
		10/22/2024, 9:06:06 AM	Scanav logs	Completed
		10/22/2024, 9:05:58 AM	Signature DB	Completed
		10/22/2024, 9:05:51 AM	waet Loa	Completed

## How the Orchestrator Works

## Key Features

- Web Interface.
- Install AV on New Partitions.
- Scan On-Access, On-Demand and Only-New.
- Update database from ClamAV and Raz-Lee.
- Database updater with support for digital signatures.
- History Log for review and analysis.
- All in one place.

## What is Only-New Scanning?

Scan for viruses is by definition CPU intensive. There are 8,600,000+ signatures that must be compared to the contents of the object. Beyond this there is the heuristic scan which search for zero-day viruses. iSecurity Antivirus marks internally object that were scanned. This happens on both On-Access and On-Demand scans.

When a file is opened, the On-Access scan is automatically called to scan the object. This WILL NOT happen if the file has not changed since it was last scanned. Huge performance advantage!

When the ON-Demand scan is used, a parameter can be set to scan Only-New or the file has changed since then. So much more efficient. So much faster.

## Orchestration For AIX Security

The New iSecurity Orchestrator makes automation and orchestration tasks easier for your iSecurity Products on the AIX Servers.

## iSecurity Orchestrator helps you to:

- Install / Uninstall iSecurity Modules.
- Activate / Deactivate iSecurity Modules.
- Update AV Signature.
- Start/End On Access Scan.
- Scan Directories.
- Send Files to Admin.
- Configure Directories for DB, Logs, Etc.
- View Logs.

## Let's Get Started

Schedule your Demo and start protecting your Systems with iSecurity Orchestrator for AIX
