iSecurity Password Reset

| Self service & | Mobile Based

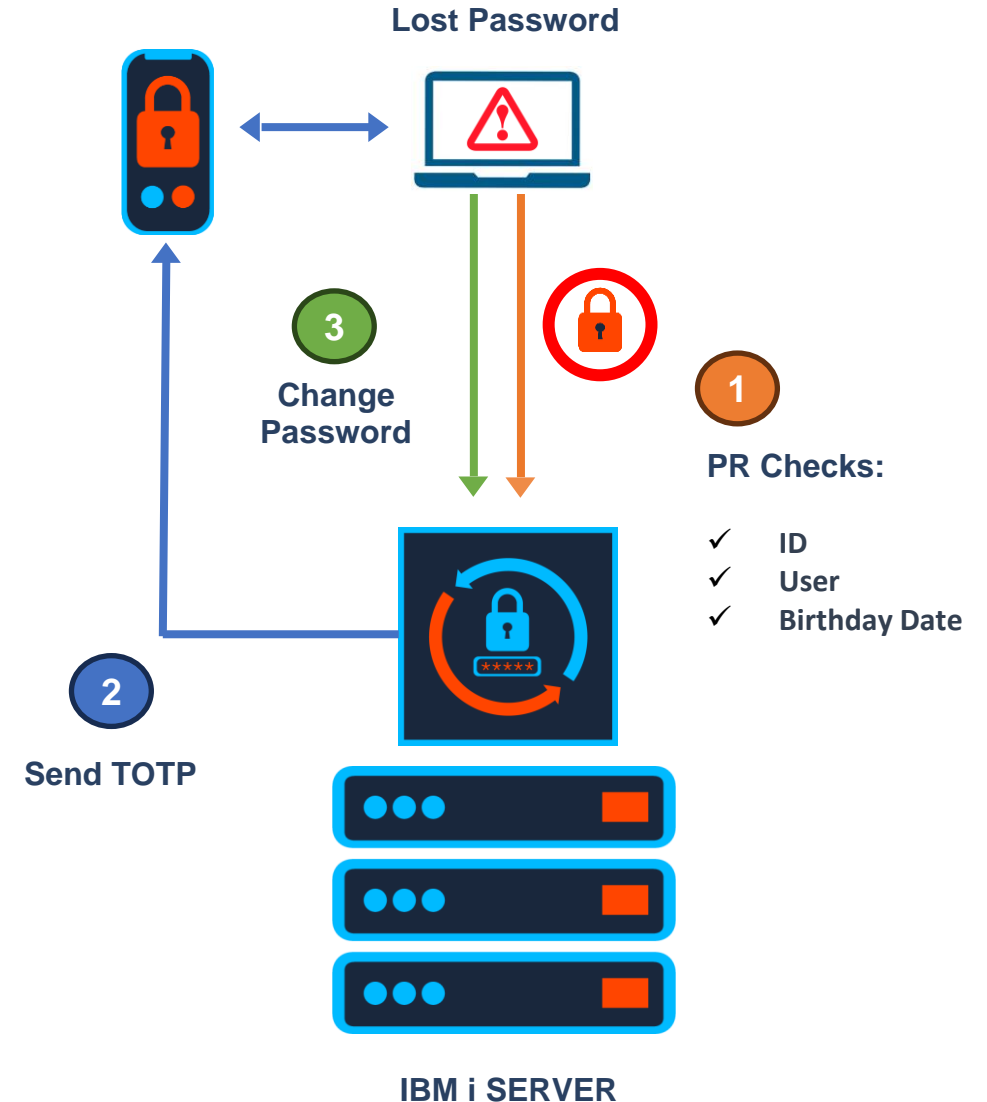

iSecurity Password Reset can either Enable user,
Display a new password or Send a new password.

Safety when Reset Passwords

With all the personal information available in Facebook, LinkedIn, and unofficial web resources, private questions are not as safe as they once were.

- ✓ Raz-Lee **Password Reset**, part of the iSecurity suite, is a unique product, designed on the principle that restoring sensitive information such as passwords without disclosure of verification questions entered by the user is more secure than any other solution against hackers.
- ✓ The outcome is a Time-based One-time Password (TOTP), providing users with a limited time window to set their own passwords

Self Service Password Reset and User Enablement

With User satisfaction on our mind, IBM i must keep up with the standard in password handling.

- ✓ Can either Enable user, Display a new password or Send a new password.
- ✓ Full Web-based and 5250 solutions, each including:
 - Self registration (with auto demand)
 - Self entering personal question
 - Regular password change
- ✓ Multiple languages.
- ✓ To prevent personal questions the procedure can be:
 - Initial identification
 - Verification pin code sent by Email/SMS (or half-half)

Let's see our Product in Action!

The best way to see how it works is a demo with
iSecurity Password Reset running on a real
environment.

RAZ-LEE

One Single Step Authentication

Secured by three levels of authentication -- personal identification, verification by intermediate one-time code, and only then personal questions

RAZ-LEE
iSecurity Self Service Password-Reset

Password Reset will automatically send you a new personal password after you provide correct responses to your personal identification questions. The new password will be sent in accordance with your organization's preferred method (email, ., etc.).

Use Password Reset only to identify yourself and request a new personal password; other uses are not allowed as they may breach your organization's security regulations and may also be a criminal offence.

Appropriate measures may be taken against those found misusing the product.
