FLASH

for 

Want to see a demo

**A daily backup of your production partition
without having to stop users and applications,
even a daily SAVE21;**

**Refresh a TEST partition
automatically
in 20 minutes.**

**Create immutable copies of the partition's disks
using IBM SafeGuarded Copy
in case of ransomware attack.**

Want to see a demo

CONTROL

for 

Want to see a demo

**Include IBM i partitions
in your existing company monitoring process.**

**Make Nagios, PRTG, Zabbix, ...
compatible with IBM i monitoring
fully understood by IBM i administrators.**

**No development
Monitor system AND applications
Install it and use it in a few hours.**

RECOVER

for 

Want to see a demo

You have only 1 server/partition
You have NO High Availability server
You have NO HA software
**But in case of disaster, you don't want to loose
the data entered since the last backup...**

You have an HA infrastructure
Every change in Database is replicated immediately...
What happens if a library/table is deleted ?
Would you like to recover it ?

Some metrics about M81

- **9** years old company
- **21** countries
- **38** partners
- **250** end-user customers
- **950** partitions
- Our 3 softwares are
 - Very easy to install
 - Very easy to use
 - The users love them
 - And they say it:

*I'm happy we are working together. I believe you have a very good product and you are quite flexible with your customers. **Control for i** works nice, without any issues at all*

*I have been using **Flash for i** in production since June 2021 with my existing Virtual Tape Library and the two together make backups very painless. **Flash for i** is working great and I am more than happy to give a recommendation if other customers in the US are interested.*

The efficiency of their product is great and their level of support and reactivity is high... You can trust them!
